Comentarios: No se observaron señales de daños significativos en la escuela que tiene dos edificaciones de hormigón de dos (principal) y un (anexo) piso. El edificio principal fue construido en el 1939. En el Salón de Ingles 8vo grado se observó empañetado brotado en el techo que ha ocurrido en otros salones pero se han corregido. Pedazos de mortero pueden caer y provocar lesiones a los estudiantes que se sientan en dirección al empañetado brotado. Los pisos en los salones de Estudios Sociales y Matemática se han asentado creando una franja vana entre el piso y la pared de aproximadamente una (1) pulgada de alto. Además en los pisos hay grietas de acabado del recubrimiento pulido fino ("topping") que llevan años formadas. La pared divisoria entre el comedor y el almacén de alimentos presenta una grieta demarcando su perímetro. A parte de lo observado en las edificaciones se encontró que los cilindros de propanos no están sujetos a la pared para evitar que se caigan y provoquen una fuga de gas. Se recomienda corregir el empañetado, reparar todas las grietas y sujetar los cilindros de propano a la pared.

B. BUILDING SITE INSPECTION

5. Utility Service Safety:

IMPORTANT—Immediately following an earthquake, check the entire property, especially near appliances, for the smell of gas. If gas odor is detected, turn off the gas at the meter where it enters the house. Locate and repair leaks before turning gas back on. If the gas odor persists after the gas has been shut off, vacate the building and contact the gas utility company immediately.

IMPORTANT—Before entering a damaged, vacant building verify that gas is off. Check the gas meter for damage and position of main gas valve, either a manual valve or a seismically-activated gas shut-off valve. Do not enter the building if gas odor is detected.
