La inspección responde a los eventos ocurridos de movimientos sísmicos durante las pasadas semanas.

Se verificaron los elementos estructurales del primer y segundo nivel según sea el caso por edificio. En el momento de la inspección se encontró grieta localizada en la loza de piso continuando a una de las columnas del edificio "C" comprometiendo su integridad estructural. Se encontró inclinación y grieta en la verja de perímetro al noreste del mencionado edificio. Se recomienda no ocupar dicho edificio y áreas aledañas a la mencionada verja de perímetro.

Disclaimer: It should be noted that, as requested, this report is based solely on a visual inspection of the as-is facility for the purpose of assessing the presence of significant structural damage resulting from the seismic event of January 07, 2020 which may affect its structural condition compared to that prior to the seismic event.

The determination of the structural adequacy of the existing facility to meet the applicable design and construction building codes requirements as well as developing recommendations for the rehabilitation of the facility will require a more extensive investigation than that one requested to be conducted and reported herein.

5. **Utility Service Safety:**

IMPORTANT—Immediately following an earthquake, check the entire property, especially near appliances, for the smell of gas. If gas odor is detected, turn off the gas at the meter where it enters the house. Locate and repair leaks before turning gas back on. If the gas odor persists after the gas has been shut off, vacate the building and contact the gas utility company immediately.

IMPORTANT—Before entering a damaged, vacant building verify that gas is off. Check the gas meter for damage and position of main gas valve, either a manual valve or a seismically-activated gas shut-off valve. Do not enter the building if gas odor is detected.
