***** IMPORTANT NOTE *****

The methodology of our professional development plan has been based on our experience in the past 15+ years offering training and technology integration services in public and private academic environments. Our work experience includes workshops to satisfy specific schools' needs, multi-day off-site training sessions, symposiums, in varying levels of implementation (districts, regions, and PRDOE system-wide). The experience, know-how and the successful logistical implementations through the years, give us the certainty that the proposed format provides the opportunity to deliver continuous, sustained and high-quality professional development, promoting meaningful learning outcomes at the schools. The training centers proposed will be in different educational regions to facilitate access for all the PRDOE personnel. The centers will be operational for 3 years during the school calendar, with the flexibility to operate on Saturdays. They will have the capacity to provide all the services described in this proposal for multiple audiences that include: teachers using laptops, tablet users, and OSIATD staff. Our PD includes specific trainings to staff not required by the RFP, but according to our experience should be involved in the process to achieve a successful implementation. Included in this staff are important leaders in promoting change; School Directors, Administrative Staff at the regional education offices, among others. For this reason, although the costs are submitted globally in part A of the table above, the services infrastructure and methodology included in our proposal give us the opportunity to provide broader services, as described in Part B of the table above, at no extra cost.
