Good Morning,

I am submitting questions for the DOE bid that includes carts to charge devices. I am the Territory Manager for Spectrum Industries. I have a few questions I would like confirmed.

1. Please confirm that the cart is required to have a 30 " x 30" footprint?
2. Can you confirm that the cart's smart timer must have a load sensing system to charge the devices the quickest way possible?
3. Can you confirm that the cart will hold 30 devices?
4. Can you confirm that there is consideration for the United States as the origin of Manufacture?
5. Can you confirm that there will be consideration for the cart to be ETL recognized as well as meet applicable ANSI-BIFMA test standards?
6. Can you confirm that the External Construction must be a welded solid steel frame of 12-18 gauge steel ?
7. Can you confirm that the cart must have a 5" minimum height from the floor, utilizing an industrial grade balloon wheel capable of supporting 250lb each with 4 non marring, fully lockable wheels?
8. Can you confirm that the cart must adhere to the UL-10 10 Degree tip threshold?

Thank you and I look forward to your reply.

Regards,

**Jonathan Gray**
